TECHNICAL PROJECTS

[Fitness Tracker](#) – C# | ASP.NET Core MVC | External API | MySQL | JavaScript | HTML/CSS

- Designed and built a full-stack fitness tracking app that lets users search exercises via an external API and save them as custom workouts. Deployed to **Azure App Service**.
- Implemented dynamic workout forms and live search with JavaScript.
- Integrated **Dapper** and SQL stored procedures for efficient database access and EF Core for user authentication. Created responsive designs and implemented sorting/filtering features options.

[StudyBug](#) – C# | ASP.NET Core MVC | External API | JavaScript | HTML/CSS

- Developed AI-powered flashcard generator using ASP.NET Core MVC and OpenAI API via RapidAPI, transforming plain study notes into interactive question-answer cards. Deployed to Azure.
- Implemented dynamic, clickable flashcards with JavaScript and CSS, allowing users to flip cards and reveal answers in real time.
- Designed clean MVC + service + model architecture for future features like user accounts and SQL persistence.
